Compass

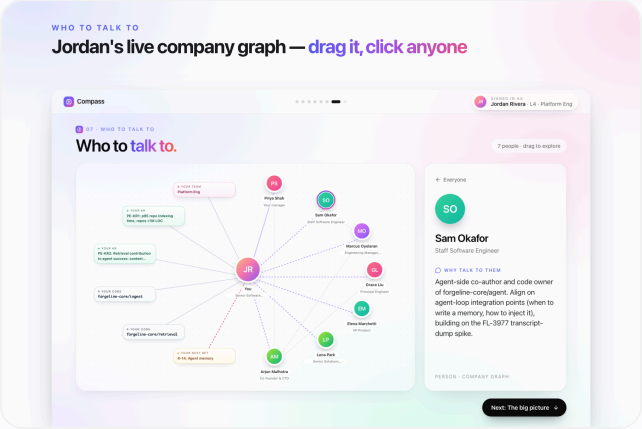

The company brain that turns market moves into roadmaps, and roadmaps into promotions.

Company Brain Hackathon · Oct 12, 2026

THE STORY

Every company already has a brain, scattered across Slack, email, meetings, roadmaps, code and reviews. In the demo, **Jordan**, a senior engineer at the fictional startup Forgeline, asks Compass: **"How do I get promoted to Staff?"**

1. **Where you stand:** ladder and reviews put Jordan at 40% ready for Staff.
2. **Why now:** research agents show 5 of 7 competitors converging on codebase memory.
3. **Your highest-alignment project:** R-14 Agent memory. It's unowned, blocks 7 goals and a $610K renewal, and lives in code Jordan owns.
4. **Make it yours:** one click claims it, writes the decision into HydraDB and drafts the pull request.
5. **Your 90 days and who to talk to**, from the live company graph.

verified public signals	real competitors tracked	company graph relationships	post-cutoff launches called	files in the drafted PR

FEATURES

Agentic market radar
Research agents fan out per competitor and intent (launches, hiring and leadership, contracts, papers, acquisitions, pricing). They cover Cursor, Cognition, GitHub Copilot, Replit, OpenAI Codex, Google and Amazon. Every signal is cited, then scored into a capability landscape.

Validated against the future
We hid every signal after Aug 1 and predicted from the earlier data alone. It called Cursor's Rollouts, Google's Antigravity enterprise push, Replit's governance tools and Codex's team workspaces, all shipped after the cutoff.

Promotion coach
Proposes high-impact projects by weighing the market, the engineer's skills, what their manager is rated on, department objectives and the company north star. It looks for the strongest alignment between personal and company goals.

Strategy → pull request
Maps competitor moves onto the roadmap, KRs and code, then acts. Accepting a recommendation writes it back into the brain (so it learns) and drafts a PR against the real codebase.

Ask anything, by voice
Cited answers with the HydraDB graph paths behind them, including today's keynote recording. The exact moment is playable: *"...not to just ask questions, but also then to take action."*

Company graph
People, teams, KRs, roadmap, code, conversations, customers and tickets, from systems of record. Zoom from the company to a team to a person to a roadmap item.

HOW IT WAS BUILT

- **Slack · email · meetings** (keynote via whisper.cpp)
- **OKRs · ladder · roadmap**
- **Code + CODEOWNERS**
- **Reviews & feedback**
- **235 competitor signals** (research agents)

→

HydraDB

A retrieval index plus a knowledge graph. Collections: `company` `market` `mem_* per person`. Declared `bring-your-own-graph` spine: Company → Signal → Capability, plus the company topology. Queries use `hybrid + graph_context` in thinking mode.

→

- **Claude Opus 5.5** structured outputs
- Radar & time machine
- Gaps → drafted PR (written back)
- Promotion plans & 90-day plans
- Cited answers & keynote clips

App-Starter (NestJS, Next.js, Postgres, Redis) · React Flow · ElevenLabs · Playwright · ffmpeg · TypeScript

Forgeline and its people are fictional · competitor data is public and cited
